

LIGHT-ABSORPTIVE ANTIREFLECTION FILTER, DISPLAY DEVICE,  
AND METHODS OF PRODUCING THE SAME

5

ABSTRACT OF THE DISCLOSURE

A light-absorptive antireflection film comprising a  
light-absorptive film formed on a glass substrate  
containing pigment microparticles and having a physical  
thickness of not less than 10 nm and an antireflection  
multilayer film attenuating reflected light of incident  
light by interference of light, wherein at least one  
layer of the antireflection multilayer film is an  
electroconductive thin film having a surface resistance  
of not more than 1000  $\Omega/\square$ , and a display device  
including the same and methods of producing them.
